

Niraj Chopra

Backend Java Developer

+91 8305443480 — nirajchopra.1757@gmail.com — linkedin.com/in/nirajchopra-964961277 — github.com/nirajchopra

SUMMARY

Computer science undergraduate specializing in Java backend development, targeting Backend Java Developer roles. Experienced in building scalable web applications using Spring Boot, Spring Security, Hibernate/JPA, REST APIs, JSP/Servlets, and MySQL, with strong understanding of Microservices architecture, Object-Oriented Programming, Data Structures and Algorithms, and Multithreading. Comfortable working across Windows and Linux environments, with hands-on Linux administration experience and DevOps tooling including Docker, Jenkins CI/CD, and AWS for cloud-based deployments. Follows Agile/Scrum methodologies and best practices for clean, testable code using JUnit and Mockito.

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML, CSS, SQL

Frameworks & Libraries: Spring Boot, Spring Security, Hibernate/JPA, REST APIs, Angular, Microservices, JUnit, Mockito

Core Java: Multithreading, Collections Framework, OOP, Exception Handling

Architecture: Microservices, Layered Architecture (MVC), RESTful API Design

Security & AI/LLM Tooling: JWT, Role-Based Access Control (RBAC), Ollama (Qwen 2.5, Llama 3.2)

Databases: MySQL

Operating Systems: Windows, Linux (Ubuntu) – daily development & administration

Linux & Systems Administration: Shell Scripting (Bash), User & Permission Management, Process Management, systemd/Service Configuration, Networking Basics, Package Management (apt/yum), Log Monitoring

DevOps & Cloud: Docker, Jenkins CI/CD, AWS (EC2, S3, RDS, IAM), Maven, Apache Tomcat

Version Control: Git, GitHub, Meld Merge

Methodologies: Agile, Scrum

Tools & IDEs: IntelliJ IDEA, Eclipse, VS Code, Postman

EXPERIENCE

Full-Stack Java Developer Intern

Dec 2025 – Jun 2026

SunilOS Infotech Pvt. Ltd. (Rays Technologies), Indore

- Successfully completed a six-month internship in Full-Stack Java Development, building applications using Java, Spring Boot, Angular, and DevOps tooling following Agile/Scrum methodology under the guidance of Mr. Sawan Panwar.

PROJECTS

MediBook – AI-Powered Medicine Booking Platform – Java, Spring Boot, Angular, MySQL, Ollama AI 2026

- Developed a full-stack medicine booking platform with role-based access for Users, Stores, and Administrators.
- Implemented secure authentication and authorization using Spring Security and JWT.
- Designed and developed RESTful APIs for medicine management, cart operations, order processing, and user management.
- Integrated local AI models (Qwen 2.5 and Llama 3.2) using Ollama to provide medicine recommendations, medicine explanations, and healthcare assistance.
- Built AI-powered analytics for administrators to generate sales insights and business summaries.
- Developed a responsive Angular frontend with dashboard, medicine catalog, cart, order history, and AI assistant modules.
- Integrated MySQL database using Hibernate/JPA for efficient data persistence and management.
- Followed layered architecture (Controller, Service, Repository) and implemented secure API communication between frontend and backend.

Online Result System – Java, JSP/Servlet, MySQL

2025

- Built a dynamic web-based result management system supporting 100+ student records with secure role-based login authentication for students and administrators.
- Enforced server-side validations and integrated MySQL database, reducing data entry errors by approximately 40 percent and preventing inconsistent records.

- Created an admin dashboard to centralize management of student records and academic results, cutting manual reporting time by approximately 30 percent.
- Architected a normalized relational database schema ensuring backend reliability and data consistency across 5+ modules.

CI/CD Deployment Pipeline – Jenkins, Docker, DockerHub, AWS EC2, Linux, Maven, GitHub 2025

- Planned and rolled out a complete CI/CD pipeline to automate build and deployment of WAR-based Java web applications using Jenkins, Docker, and AWS EC2 running on Linux servers.
- Containerized Java Servlet/JSP applications using Docker and pushed images to DockerHub; configured Jenkins to pull and deploy on AWS EC2, reducing deployment time by approximately 60 percent.
- Administered Linux EC2 instances end-to-end – managed users and file permissions, configured systemd services, and wrote Bash scripts to automate startup and health checks.
- Configured Jenkins with Tomcat Deploy Plugin to deploy applications from GitHub to Apache Tomcat via automated build triggers, eliminating 100 percent of manual deployment steps.
- Streamlined release cycles through Maven build integration and GitHub webhooks, enabling zero-touch deployments on every code push.

EDUCATION

APJ Abdul Kalam Technological University	2022 – 2026
<i>Bachelor of Engineering (B.E.), Computer Science</i>	<i>Indore, Madhya Pradesh, India</i>

CERTIFICATIONS

Java (Basic): HackerRank, Certificate ID: 1319CC4430E3
SQL (Basic): HackerRank, Certificate ID: B72A32E575FB
AWS Cloud: TrainWithShubham, Certificate ID: EVD0VEYK
AI Tools Workshop: Be10x
Fundamentals of Docker and Kubernetes: Scaler
